EDUCATION

University of Waterloo

June 2028

Candidate for BAsC in Mechatronics Engineering

Waterloo, ON

- **Coursework:** Data Structures, Algorithms, Linear Algebra, Circuits, OOP, Microprocessors, Digital Logic (FPGA, PLC), Mechanics of Deformable Solids, Structure and Properties of Materials, Statistics, Ordinary Differential Equations

EXPERIENCE

Humanoid Robotics Engineering Co-op

May 2025 – Present

WATonomous

Waterloo, ON

- Designing and prototyping **dexterous humanoid arms** with the goal of autonomous keyboard typing.
- Developing software interface to bridge high-level **ROS2** control and low-level embedded systems over a **CAN bus**.
- Containerizing ROS2 system in **Docker**, mounting CAN transceivers to enable communication between subsystems.
- Developing **URDF** models to define kinematic chains and hardware specifications for humanoid robot sim and control.
- Implementing embedded **C++** firmware on **STM32** microcontrollers for sensor data acquisition and feedback control loops.
- Designing **PID controllers** and **Kalman filters** for control and state estimation of robotic arm joints.

Undergraduate Research Assistant

September 2024 – December 2024

University of Waterloo - Engineering IDEAs Clinic

Waterloo, ON

- Instrumented a wearable knee crutch, allowing force readings for gait analysis and material selection via **FEA**.
- Built swarm robots using **Gazebo** and **TurtleBot3**, showcasing **LIDAR** integration and **odometry** in Python.
- Implemented **adaptive cruise control** on physical robots using **PID** controllers in **C++** and **Python** packages.

Mechanical Engineering Associate

January 2024 – April 2024

Sheartak Tools Ltd.

Waterloo, ON

- Designed 15 third party woodworking machinery upgrades with **DFMA** in **SolidWorks** to meet OEM specifications.
- Applied **GD&T** principles to guarantee manufacturing accuracy for custom machine parts.
- Created 25 detailed installation manuals, including parts lists and assembly instructions, ensuring ease of use for customers.

PROJECTS

Autonomous LiDAR Navigation for Mobile Robot

- Developed **C++ ROS2** nodes to convert **LiDAR** data into a **2D costmap** for obstacle detection and perception.
- Generated a **world model** from costmap and odometry data to represent the current environment.
- Implemented **A* algorithm** to compute obstacle-aware paths through the mapped environment.
- Applied **Pure Pursuit** to follow planned paths for smooth differential drive navigation.
- **Dockerized** the system and integrated with **Gazebo** and **Foxglove** for simulation, debugging, and real-time visualization.

Instrumented Knee Crutch

- Designed a digital CAD twin of an existing knee crutch in **SolidWorks**.
- Developed a **data aquisition** system using **I2C** and Arduino, converting a bathroom scale for real-time load measurements.
- Prototyped **3D-printed** mounts and knee platforms for strain gauges, ensuring user comfort.
- Built **Python** scripts for force distribution visualization in **Matplotlib**, with data logging for **gait analysis**.

Self-Balancing Unicycle

- Utilized **C++** and **CMake** to develop a graphical simulator that demonstrates **PID control** to keep the unicycle upright.
- Implemented **Git** submodules to reference third-party **OpenGL** wrappers, to visualize the simulation.

TECHNICAL SKILLS

Mechanical: SolidWorks, AutoCAD, GD&T, CAD, FEA, DFMA, 3D Printing, Machine Tools, Onshape, Fusion360

Electrical: KiCAD, I2C, SPI, UART, CAN Bus, Arduino, ESP-IDF, Soldering, Oscilloscope, LiDAR, PLC, LAD, VHDL, FPGA

Software: Python, C, C++, CMake, OpenGL, JavaScript, TypeScript, HTML, CSS, Bash, SQL, LaTeX, ROS2, Docker

Libraries/Frameworks: OpenCV, Mediapipe, Linux, Ubuntu, Git, SSH, Django, Flask, NumPy, Matplotlib, Node.js, React
